

## Stay On. When it matters most.

Contingency planning for building services and construction.

Aggreko engineers and technical experts work with your teams ahead of potential downtime to design contingency plans tailored to your site or facility's unique needs.

In the face of the unexpected, trust Aggreko to help you keep operations on and your people supported.

# Engineered for critical environments

From plan to performance, we execute with precision. Using real data from your site, we design and deploy rightsized solutions quickly and efficiently, so you're ready when the unexpected hits. Once solutions are delivered, Aggreko Remote Monitoring (ARM) gives our engineers full visibility to adjust output, optimize performance, and stay ahead of maintenance on our equipment.

We also offer Aggreko fuel management and services for top-quality, pre-scheduled fuel supply to reduce strain on your team. The result is a fully managed solution that adapts in real time.

By planning ahead, we empower you to reduce risk, protect uptime, and secure your business' progress.

## Equipment without the CAPEX

- Tier 4 Final diesel and natural gas generators
- Battery Energy Storage Systems (BESS)
- Temperature control
- 100% Oil-free compressed air
- Electrical distribution

## Plan now. Stay in control later.

Reduce downtime with pre-engineered, ready-to-deploy solutions

Avoid emergency rental premiums with agreed costs upfront

Protect critical services, assets, and environments

Maintain compliance and safety during disruption

Stay operational through outages, failures, and extreme conditions

Gain real-time visibility and control with ARM

Ensure fuel quality, availability, and compliance with fuel management and services

## One plan. One call. Immediate response.
