

Engineered energy and temperature control for healthcare facilities.

Our experts design, deploy, and optimize flexible power and temperature control to provide seamless continuity to keep healthcare environments 'on'. With 60+ years of experience, Aggreko technicians can fit your campus with critical temporary utilities that function like permanent equipment, without the CAPEX.

- Ensure reliable central energy solutions.
- Regulate and improve indoor air quality.
- Deliver 100% Oil Free Air for an environment free of contaminants.
- Continue processes without interruption.
- Maintain compliance and safety where it matters most.
- Count on 24/7 equipment monitoring by real engineers and technicians from our Remote Operations Center.
- Lower fuel consumption and costs with best-in-class equipment and data-backed efficiencies.

Your critical utilities lifeline

Seamless backup power engineered to your facility's unique needs.

Contingency planning to maintain your operations in an emergency.

Climate control for critical heating and cooling in all areas, especially labs and surgical suites.

HVAC systems to remove moisture and maintain compliance after a storm or during facility renovations.

→ CHP (combined heat and power) is highly efficient and offers organizations secure on-site power that is more environmentally friendly than traditional diesel generation.
