

Keeping government facilities running without disruption.

Reach out for our existing contract vehicles.

Built to support essential public services.

Government facilities operate under constant scrutiny and a high importance placed on maintaining operations under even the toughest conditions. Aging infrastructure, constrained budgets, and evolving operational demands place increasing pressure on facility teams to maintain uptime, safety, and comfort without disruption to public services.

Planned upgrades, unplanned outages, and seasonal extremes can quickly impact operations, productivity, and public trust. When systems falter, continuity is non-negotiable.

Aggreko supports government facilities with custom power, temperature control, and dehumidification solutions designed to maintain systems and processes while infrastructure is repaired, upgraded, or expanded.

Utility support that adapts to your facility.

Our solutions are engineered to integrate seamlessly into active government environments. Whether supplying temporary energy during electrical upgrades, augmenting cooling during HVAC replacements, or protecting facilities from weather-related risks, Aggreko technical experts work to carefully design systems that perform like permanent infrastructure, without capital investment.

Our engineers and technicians understand the operational sensitivities of government buildings and deliver solutions that are dependable, discreet, and scalable.

Reliable. Resilient. Ready.

Beyond equipment, our government facility experts provide systems carefully tailored to campus specifications and usage needs, so facility teams can focus on serving the public. We help you:

- Maintain continuity during renovations or outages
- Support critical systems and occupied spaces
- Reduce exposure to weather-related risks
- Scale capacity as facility needs change
- Meet compliance and safety requirements

Equipment engineered for public infrastructure.

Tier 4 Final Diesel and Natural Gas Generators

Electrical Distribution

BESS

Chillers

Air Conditioners

Dehumidifier

Hydronic Heaters

Applications where we excel.

T4F NATURAL GAS

Temporary power during infrastructure upgrades

DEHUMIDIFIER

Dehumidification for records storage and secure areas

T4F DIESEL

Backup and supplemental power for government buildings

CHILLERS

Chilled water for offices, courts, and public facilities

TRAILER-MOUNTED 400 KW T4F DIESEL + ELECTRICAL DISTRIBUTION

Emergency power deployment for rapid recoveries

HYDRONIC HEATERS

Seasonal heating and freeze protection

AIR CONDITIONERS

Supplemental cooling during HVAC maintenance

A partner you can depend on.

From routine maintenance to unexpected challenges, Aggreko delivers engineered temporary utilities that support continuity, safety, and confidence.

Our specialists work pro-actively with your teams to anticipate needs, manage complexity, and keep facilities running without interruption. Available 24/7, Aggreko brings experience you can rely on—today and into the future.
