AGGREKO CONNECT

Aggreko Connect

Monitor • Manage • Control

At Aggreko we power progress, not only by ensuring you have energy anywhere you need it, but also by enabling you to have greater control of your energy solutions whenever you want.

With Aggreko Connect, you can manage your account and your temporary assets more effectively.

Aggreko Connect is your online hub that you can access anytime, anywhere for all your account and equipment performance information in one central place. From visibility of your orders and invoices to key operational and performance data, we know there are crucial business updates that you need access to in order to stay informed and make the best decisions.

With Aggreko Connect you get powerful insights into your business, enabling you to maximize your efficiencies. With speed and simplicity, you can get on-site information on the go, monitor equipment performance, and gain greater insights through data-driven reports.

It's a simpler and better way to manage your account and temporary assets that puts you in control of your energy solutions.

Get on-site information on the go

Manage your account more effectively

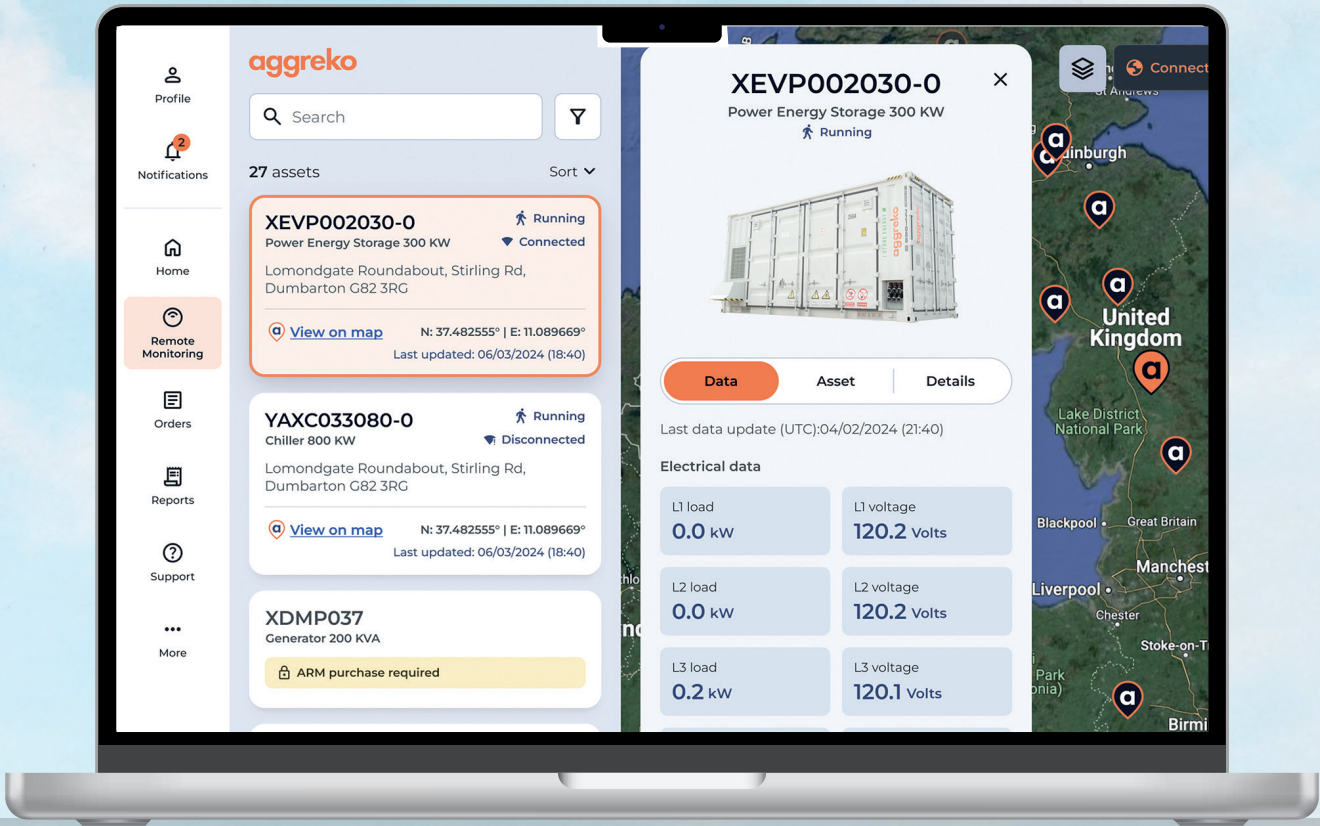

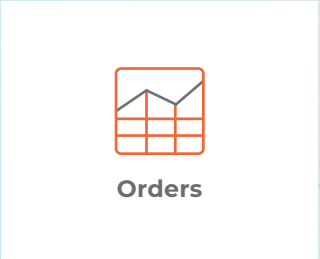

Now you can get the information you need, even when you're off-site. With Aggreko Connect, you can view your assets in one easy step, check the status of your orders, access invoice information and even personalize on-hire equipment for easy identification.

 Alert notifications for items requiring your attention

 Order status and key dates

 Order detail and invoices

 Equipment mapping - see our equipment on your sites live in real-time thanks to Aggreko Remote Monitoring (ARM) telemetry

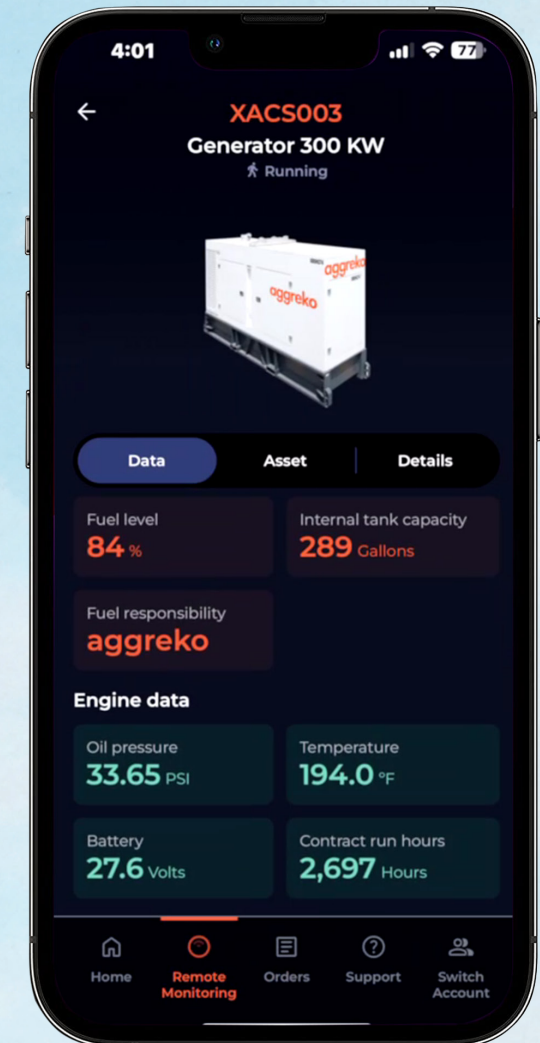

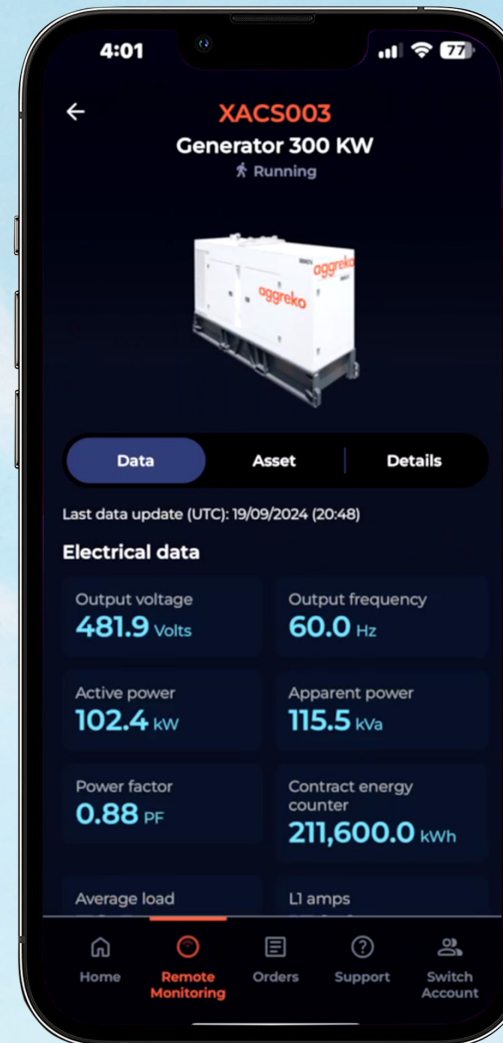

Boost your operational efficiency

Monitor equipment performance

Your online account allows you to view active power of your on-hire assets along with electrical, fuel, temperature and engine data.

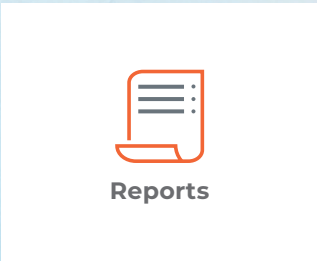

You can proactively monitor performance and more for all our Aggreko Remote Monitoring (ARM)-equipped fleet, including:

- Energy consumption details
- Asset and equipment information
- On-hire asset details and notifications
- Asset location – simply check out the map to conveniently view all your assets

Gain greater insight

Monitor emissions & operational efficiency

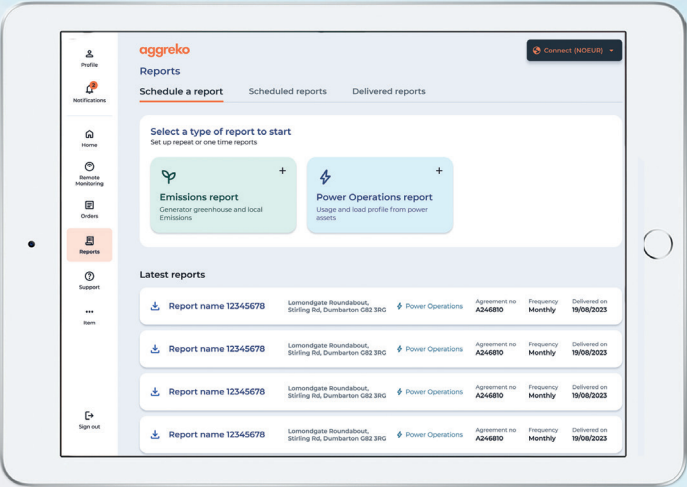

Knowing how your equipment is operating is key to efficiency. With Aggreko Connect's reporting feature, you now have access to more data so you can fully understand the capabilities of your energy solutions.

Operations Reporting

Learn how your equipment is operating with our Operations report which delivers load profile, usage and allows you to understand how your power solutions are operating together throughout the rental duration.

Emissions Reporting

With our Emissions report you will have greater insight into the carbon and local emissions – such as Nitrogen Oxide (NOx), Particulate Matter (PM) and Hydrocarbons (HC) – being produced, by asset and by agreement.

Essential intelligence, actionable insights

Aggreko Remote Monitoring (ARM)

ARM transmits real-time data from equipment, allowing our highly skilled team at Aggreko Remote Operations Center (ROC) to anticipate, diagnose and solve any issues faster and with greater accuracy. We can even proactively prevent potential issues before they occur.

Should a problem arise, users will be notified of any critical performance alarms so that issues can be fixed as soon as possible. This service can also include fuel management, calculating what is needed based on usage and scheduling deliveries to match.

For managers of mission-critical, around the clock operations, this delivers information including run status, load and fuel levels anytime – with the peace of mind knowing equipment is being monitored with quick resolution to any problems day or night.

For field operations with multiple pieces of equipment in remote areas, it means knowing the exact location of the ones needing maintenance, with expert technicians providing instruction and on-site support. Or, knowing exactly when to call for fuel, optimizing fuel delivery scheduling and costs.

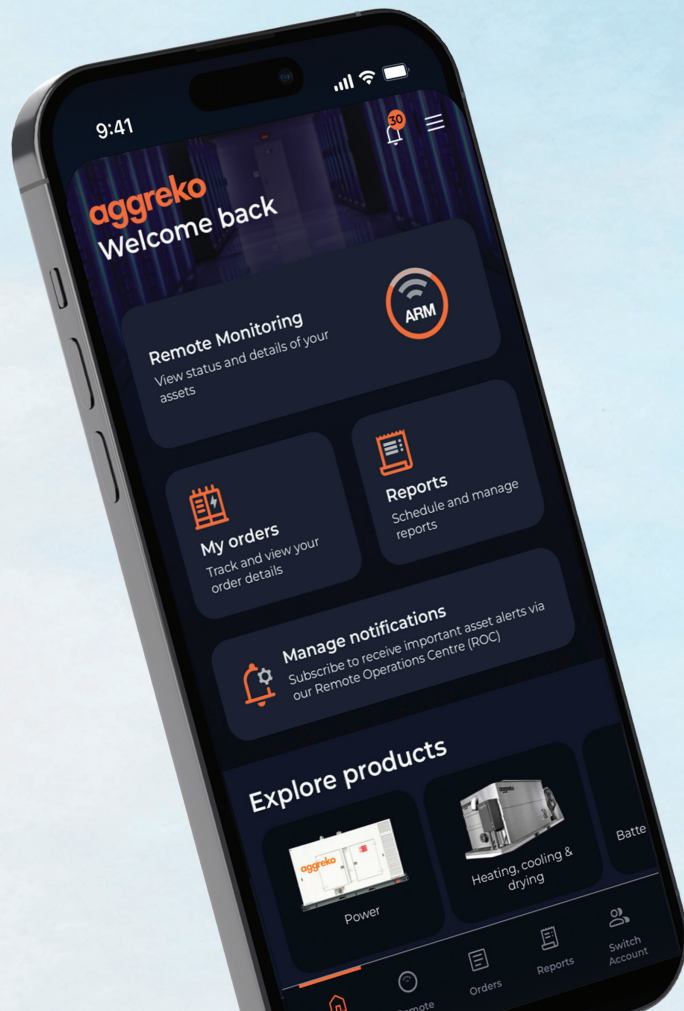

Key Benefits:

- Proactive monitoring 24/7 to minimize risk and resolve issues before incidents occur
- Receive critical performance notifications for alarms on sites that you subscribe to
- Rapid response to emergencies and technician assistance
- Maximize uptime
- Increase asset productivity
- Improve operational efficiency

The Aggreko Connect App is here!

The same operational reliability, information transparency and customer support you get from the Aggreko Connect web portal... **now at your fingertips!**

With the Aggreko Connect app you can still **manage your account, monitor your temporary equipment, receive actionable insights and get support**, only now you can do so on your phone and on the go, making it quicker, more convenient and streamlined to:

				
Orders	Reports	Remote Monitoring	Remote Operations Center	Support
View and manage your account information	Make data-driven decisions and improve efficiencies	Monitor your equipment's performance and operations	Receive critical performance notifications for alarms on sites you subscribe to	Communicate with and receive support when you need it

Access your enhanced Aggreko experience

Download the Aggreko Connect app now!*

*The same credentials you currently use for the Aggreko Connect web portal will grant you access to the app. If you have any issues, please contact your sales representative.

Small switch. Big difference.

We understand the challenges our customers face to lower carbon emissions, reach Net Zero, improve operational efficiencies and lower costs. That's why we're committed to offering flexible and sustainable power, energy and temperature control solutions.

From facilitating carbon neutral construction to building sustainability into their own operations, **Greener Upgrades** provides our customers with the knowledge they need to choose the right solution for them. Our principles are simple. We invest in the latest products, use our expertise to apply them in the most efficient way and leverage technology to optimize asset performance. Hybridizing for maximum efficiency, with unique controls that optimize performance monitoring capability.

We're Energizing Change through **Greener Upgrades and helping businesses to improve efficiency, lower costs, and make choices that support their sustainability goals.**

We enable the small shifts that make a big difference – and help our customers progress their Energy Transition along their own path and at their own pace, unlocking a new level of customer value.
