

Business continuity support services for manufacturers

Flexible contingency planning tailored to your facility's unique risks

Unplanned utility interruptions can disrupt production and impact profitability. **Aggreko helps manufacturers stay operational with customized business continuity plans** and temporary utility solutions that minimize downtime.

Our engineers can conduct thorough interconnect studies to implement necessary mechanical and electrical upgrades, allowing for safe and efficient temporary utility connections.

Aggreko's in-house engineering capabilities play a vital role in this process. Our Technical Services & Engineering (TS&E) team conducts comprehensive site visits and

scoping studies to identify potential vulnerabilities and help design necessary upgrades as required for temporary installations.

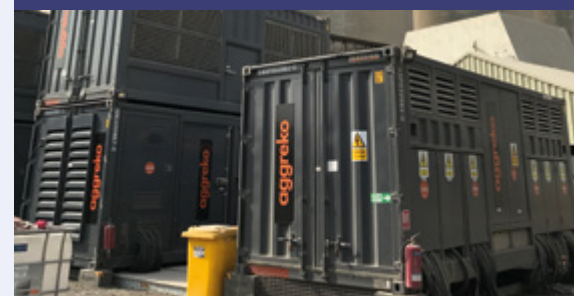

Each facility's risk exposure varies based on geography, redundancy, contractual obligations, and insurance considerations. Food plants, for instance, face additional risks due to perishable goods.

Aggreko offers a full spectrum of business continuity solutions—from basic contingency support to detailed, engineered plans. Our regional customer service representatives are ready to help develop a tailored plan that meets your plant's needs.

Contact us today to get started.

Key benefits:

- Minimize business disruptions and losses during unexpected equipment outages
- Discover ways to streamline and simplify temporary utility connectivity
- Gain peace of mind knowing your business is prepared for the unexpected
- Ensure safe and efficient setup by eliminating ad-hoc, unplanned connections

Key considerations for business continuity planning

Drivers (why plan?)

- **Operational risks** (e.g., high-risk location, old infrastructure)
- **Financial risks** (e.g., high-value products, contractual commitments)
- **Regulatory/insurance risks** (e.g., insurer expectations, EH&S compliance)

Stakeholders (who's involved?)

Local:

- Plant manager
- Controller
- EH&S manager
- Engineering manager

Corporate:

- CFO
- Business continuity director
- VP engineering
- ESG director

Solutions (how to prepare?)

Documentation

- High-level plan
- Detailed, engineered BCP

Quick connect tie points

Standby equipment

- On-site standby
- Storm standby
- Hurricane / fire plan
- Aggreko depot standby

The Aggreko difference

Our comprehensive approach to contingency planning ensures that manufacturing facilities can maintain continuous operations, even in the face of unexpected utility failures.

By providing temporary solutions for critical utilities and process, we help our customers protect their investments, maintain compliance, and ensure timely product delivery.

We deliver peace of mind through engineered contingency plans to manufacturers, allowing them to focus on vital operations and maintaining production levels.
