

Group Environment Policy Statement

We recognize our environmental impacts arise from how we generate energy, manage fuel, transport equipment and move people.

Each of our businesses, our employees and our business partners are required to embrace this policy and comply with our commitments as outlined below.

We are committed to:

- **Ensure** compliance with applicable legal requirements, regulations and standards
- **Assess** and eliminate or minimise negative environmental impacts
- **Train** our employees in preventative and remedial environmental practices
- **Proactively** explore opportunities to improve the efficiencies of our equipment and operating practices
- **Evaluate** our operations and controls, setting targets that drive improvements in our environmental performance
- **Involve** suppliers and contractors to pursue best environmental practice
- **Investigate** all environmental incidents and apply relevant learnings
- **Share** knowledge through open communications on environmental improvements and promote a learning culture
- **Deliver** efficient business solutions that meet customers' needs

The success of this policy requires the full involvement and commitment of everyone working on behalf of Aggreko.

The Group Director of HSE is responsible for ensuring that Aggreko maintains a comprehensive management system that is routinely audited, and provides assurance to the Executive and the Board, who regularly review our environmental performance.
